

Robert F. Kennedy Jr. & Wal van Lierop to take the stage at GLOBE 2014 in special session on Innovation and the Clean Technology Future

Only 200 Tickets Available - On Sale for 3 Days Only: March 17-19

March 17, 2014

Vancouver, Canada – GLOBE 2014, returning to Vancouver March 26-28, promises to be the best event yet with innovative leaders and globally recognized names. Don't miss the exciting dialogue between world-renowned environmentalist and venture capitalist Robert F. Kennedy, Jr. and energy technology investment veteran Wal van Lierop as they discuss the future of clean technology during a special GLOBE session being held at 2:00pm on Wednesday, March 26.

Robert F. Kennedy Jr. has built a solid reputation as a champion of the environment as the President of the Waterkeeper Alliance, with over 150 chapters worldwide. He's taken that advocacy to free-market capitalism, by becoming a strong advocate for clean technology investment.

Wal van Lierop, CEO of Chrysalix, is an energy technology veteran who has raised over \$1 billion for early stage technology ventures. With a long-standing passion for clean energy innovation, he has been honoured at number 16 within the Clean Capitalism Top 50, and sits on several clean energy and venture boards.

The talk has been sponsored by Met Gas Industries, a sustainable natural gas exploration company that has developed a unique and patented extraction process for natural gas that does not use chemicals. The plenary session and talk will be produced by James Riley, CEO of the Kumu Agency, a leading digital advertising agency which has a practice focused on sustainability and philanthropy for Fortune 500 brands. Kumu Agency partnered with Keppler Speakers in securing RFK's participation in the GLOBE event.

Tickets for this special GLOBE 2014 session will be on sale March 17-19 for \$95 each. Only 200 tickets are available.

Organized by GLOBE Events, a division of the GLOBE Group of companies.

About Metgas

Metgas is a Vancouver based natural gas technology company which has developed a successful patented gas extraction technology that is environmentally benign. The Metgas technology process is based on a closed loop system which extracts gas from non-potable gas rich water aquifers. The company does not frack, and does not use chemicals. California, which has some of the strictest environmental regulations in the world, has approved the Metgas extraction process on 1120 leased acres.
